

AHMED BEN SALAH

ICT Engineering Student | AI & Machine Learning | Cybersecurity

ahmedbensalah.professional@gmail.com ♦ +216 94 466 757 ♦ Tunis, Tunisia ♦ [linkedin.com/in/ahmedbensalahh](https://www.linkedin.com/in/ahmedbensalahh) ♦ github.com/Ahmedd-Ben-Salah ♦ ahmedd-ben-salah.github.io

PROFESSIONAL SUMMARY

Motivated ICT Engineering student at INSAT (2024–2029) specializing in Artificial Intelligence, Machine Learning, and Cybersecurity. Proven ability to design and build full-stack AI-powered applications, multi-agent RAG systems, and autonomous robotics systems. Holder of multiple industry-recognized certifications from Harvard, IBM, and Cisco. Passionate about the intersection of AI and security, with hands-on experience in penetration testing, neural networks, and cloud computing. Seeking an internship or junior engineering role to apply strong technical foundations in a fast-paced, innovation-driven environment.

EDUCATION

National Institute of Applied Science and Technology (INSAT)

Engineering Degree in Information and Communication Technologies (ICT) · Specialization: Artificial Intelligence & Machine Learning

Tunis, Tunisia

- 5-year engineering program covering software engineering, networking, AI, machine learning, data science, and embedded systems.
- Active in competitive programming, cybersecurity research, and hands-on AI/ML projects.

EXPERIENCE

Welyne · ai-commandos.com

AI & Automation Intern · April 2026 – June 2026 · Remote

- Designed and built an end-to-end LinkedIn automation system that scrapes high-value profiles (CEOs, C-suite executives) and autonomously executes personalized connection requests and outreach messages at scale.
- Engineered intelligent workflow pipelines combining web scraping, LLM-powered message personalization, and behavioral automation to eliminate hours of manual outreach work.
- Integrated AI agent logic to adapt messaging strategy based on target profile data, increasing relevance and engagement across automated campaigns.
- Delivered the tool as part of the ai-commandos.com platform, applying prompt engineering and API integration to build a production-ready automation product.

TECHNICAL SKILLS

AI Agents & LLMs	LLM Integration, Prompt Engineering, Multi-Agent Systems, RAG Pipelines, LangChain, AI Workflow Automation, Autonomous Agents
Automation	Web Scraping, Workflow Automation, API Integration, Pipeline Design, Process Automation, Intent-Based Automation
AI / ML	Machine Learning, Deep Learning, Neural Networks, FAISS Vector Embeddings, scikit-learn, Pandas, NumPy
Languages	Python, C++, C, Java, JavaScript, Bash/Shell Scripting, R, SQL
Web & APIs	Full-Stack Development, React, Node.js, REST APIs, Flask, HTML/CSS, Databases (SQL/NoSQL)

Cybersecurity	Penetration Testing, Network Security, Ethical Hacking, Wireshark, Nmap, Linux (Kali), CCNA Networking
Tools & DevOps	Git, GitHub, Docker (basic), VS Code, Arduino, SolidWorks, TryHackMe, HackTheBox

PROJECTS

NXP Cup – 3rd Place, National Autonomous Car Competition | C++ · Teensy Microcontroller · PID Control · SolidWorks · Embedded Systems · IEEE INSAT RAS

- Achieved 3rd place out of 16 teams at the national NXP Cup competition — as the youngest team in the field — despite the main Teensy board short-circuiting 60 minutes before the race with no test runs on the replacement hardware.
- Led a hybrid software/hardware role: designed and refined chassis components in SolidWorks for structural precision, while owning real-time PID control software for high-speed, stable line tracking.
- Flashed firmware onto borrowed hardware with zero calibration time; the robot navigated the full track and stopped exactly 5 cm from the target cube on the second lap.

Dalanda – Multi-Agent AI Automation System | Python · LangChain · FAISS · React · Multi-Agent AI · RAG · Prompt Engineering

- Architected a multi-modal, multi-agent RAG system that autonomously ingests images, audio, and documents, using specialized AI models to extract and structure data per modality.
- Designed and deployed an autonomous agent verification pipeline that cross-checks AI-generated responses against source data, eliminating hallucinations without human review.
- Built API-connected workflows enabling semantic FAISS vector search with intelligent filters, grounding all LLM outputs in verified personal data.
- Delivered a production-ready React interface with voice input, allowing non-technical users to interact with complex AI pipelines through natural language.

CiscoLabAI – AI-Powered Network Automation Workflow | Python · LLM Integration · Prompt Engineering · Cisco Packet Tracer · API Integration · NetDevOps

- Built an AI-powered automation workflow that reduced Cisco Packet Tracer lab configuration from 70 minutes of manual CLI work to under 3 minutes — a 95% reduction in manual effort.
- Automated full dual-stack (IPv4 + IPv6) addressing, device hardening, and advanced routing logic by integrating LLM-driven intent parsing with configuration generation pipelines.
- Applied intent-based automation principles: the tool interprets architecture-level goals and autonomously generates and deploys the correct configuration sequences.
- Iterating toward state-aware protocol automation (STP, Inter-VLAN routing, EtherChannel) to expand the tool into a full NetDevOps automation platform.

CERTIFICATIONS & LICENSES

CS50: Introduction to Computer Science	Harvard / edX	Algorithms, data structures, C, Python, SQL, web development
Applied Calculus	Harvard (Verified)	Applied mathematics and quantitative reasoning
Data Science Professional	Harvard / edX	R programming, statistical analysis, data visualization
Full Stack Web Development	IBM	Front-end, back-end, databases, frameworks
CCNA – Intro to Networks	Cisco	Routing, switching, networking fundamentals
